

# Changelog yuuviz RAD 8.10

Schlüssel	Zusammenfassung	Beschreibung
ERA-8791	Calls to external HTTP are possible via Script-API	<p>As a developer of a workflow, I would like to be able to make an HTTP call to any external service from any workflow script. (Currently, only calls to yuuviz RAD services via the DMS sidecar are possible.)</p> <p>Acceptance criteria:</p> <ul style="list-style-type: none"><li>• If service property of the http class is not set, the path is used as-is to build the URL for the http call, thus allowing access to an arbitrary URL</li><li>• If service property of the http class is set, then it will be used as before to access yuuviz RAD internal services and the resulting URL is built from service + path</li></ul>
TUK-862	As an administrator, you are supported by an operation that prolongs the retention time for the found objects	<p>As an administrator, you are supported by an operation that prolongs the retention time for the found objects so that I do not need a programmer for implementing such jobs using the REST-API.</p> <p>Acceptance criteria:</p> <ul style="list-style-type: none"><li>• The management studio offers an operation 'Prolong retention time/Aufbewahrungsdauer verlängern' in the node 'Repository operations'<ul style="list-style-type: none"><li>◦ The dialog for this operation looks and behaves similar to the archive operation.</li><li>◦ The operation sets the via eSQL statement found objects to the calculated retention time given by the retention period to be added.</li><li>◦ A report including errors is available (if retention cannot be prolonged, then this is recorded in a log).</li></ul></li></ul>
TUK-1196	As a user, you are supported by a differentiated error message if the personalization of a task failed	<p>As a user, I want to be supported by a better errors description if the personalization of a task was not possible due to a server script issue so I inform the administrator better.</p> <p>Acceptance criteria:</p> <ul style="list-style-type: none"><li>• The responded error code is additionally evaluated and shown to the user in a localized manner:<ul style="list-style-type: none"><li>◦ Status code "409 (Conflict)"<ul style="list-style-type: none"><li>▪ If necessary, it is possible to change to 500</li></ul></li><li>◦ Key: BPM_EVENT_SCRIPT_EXECUTION_ERROR"<ul style="list-style-type: none"><li>▪ en: "The server script execution failed."</li><li>▪ de "Die Server-Script-Ausführung scheiterte."</li></ul></li></ul></li></ul>
TUK-1214	As the system responsible, you are supported by dms and rendition sidecar services that are based on Spring Boot 2.7.0	<p>As the system responsible, I am supported by services that are based on Spring Boot 2.7.0 so that we can get support in case of issues and that high CVEs are removed.</p> <p>Remark: Version 2.5.x is out of support.</p> <p>Acceptance criteria:</p> <ul style="list-style-type: none"><li>• These services are based on 2.7.0:<ul style="list-style-type: none"><li>◦ rendition sidecar</li><li>◦ dms sidecar</li></ul></li></ul>
TUK-1234	You are supported by English and German labels	<p>As an administrator, I want to be supported by English and German labels so that I can understand what a read.</p> <p>As a programmer, I want to be supported to get new keys that I have created added to the en.json and de.json with an empty label so that I can see which labels are missing and I can add them.</p> <p>Acceptance criteria:</p> <ul style="list-style-type: none"><li>• The labels for de and en are existing.</li></ul>
TUK-1237	You are supported by your user profile image in the appbar including a menu	<p>As a user, you are supported by your user profile image in the appbar so that you can see which account you have used to log in.</p> <p>Acceptance criteria:</p> <ul style="list-style-type: none"><li>• The user profile image is shown if given. Otherwise, the standard image is shown that is used by the client.</li></ul>

TUK-1246	As the system responsible, you are supported by services that are based on Spring Boot 2.7.2 to get rid of critical CVEs	<p>As the system responsible, I am supported by services that are based on Spring Boot 2.7.0 so that we can get support in case of issues.</p> <p>Remark: Version 2.5.x is out of support.</p> <p>Acceptance criteria:</p> <ul style="list-style-type: none"> <li>• These services are based on 2.7.2: <ul style="list-style-type: none"> <li>◦ infrastructure services</li> <li>◦ gateway service</li> <li>◦ agent service</li> <li>◦ structure service</li> <li>◦ index service</li> <li>◦ search service</li> <li>◦ template service</li> <li>◦ extraction service</li> <li>◦ ocr-service</li> </ul> </li> <li>• These services will follow with yuuviz RAD 8.12: <ul style="list-style-type: none"> <li>◦ client-service</li> <li>◦ archive service</li> <li>◦ repository manager service</li> </ul> </li> </ul>
TUK-1248	As a user, you are supported by folder title that is presented with a longer title before cutting it and showing '...'	<p>As a user, I want to be supported by folder title that is presented with a longer title before cutting it and showing '...' so that I do not have to focus the folder getting the object details with a longer presented title.</p> <p>Acceptance criteria:</p> <ul style="list-style-type: none"> <li>• Alternative one: The tab is made longer so that a long title is displayed better.</li> <li>• Alternative two: A tooltip is showing the complete title.</li> </ul>
TUK-1252	As a user, you are supported by a main menu showing an image and menu items	<p>As a user, I want to be supported by a main menu showing an icon and menu items so that I can reach the view I want to work with.</p> <p>Acceptance criteria:</p> <ul style="list-style-type: none"> <li>• The main menu shows the image that is in the client. <ul style="list-style-type: none"> <li>◦ an X is offered for closing the menu. Hovering over it indicates that it can be clicked.</li> </ul> </li> <li>• The menu is flat and shows all items which are currently given, but only 'Settings/Einstellungen' is active the other ones are set inactive. The look and feel are similar to the client. <ul style="list-style-type: none"> <li>◦ A 'Navigation'-Titel is given above the list of items.</li> <li>◦ The menu scrolls only the items, and the image is stable.</li> </ul> </li> </ul>
TUK-1261	As a user, you are supported by a yR favicon and a title for each view	<p>As a user, I want to be supported by a yR favicon and a title for each view so that I can better find my tab beneath others in the browser.</p> <p>Acceptance criteria:</p> <ul style="list-style-type: none"> <li>• There is a tab title for each view</li> <li>• There is a favicon with a tooltip showing the tab title similar to the client. The dashboard view shown 'yuuviz(r) RAD management studio ng'</li> </ul>
TUK-1270	As a user, you are supported by a settings view	<p>As a user, I want to be supported by a view where I can configure my app.</p> <p>Acceptance criteria:</p> <ul style="list-style-type: none"> <li>• There is a header showing the user profile data similar to the client including the buttons for switching the absence status.</li> <li>• There is an empty body that will be extended step by step in the future</li> </ul>
TUK-1292	As an administrator, you can configure additional addresses for the IP-Filter that controls the system-user access	<p>As an administrator, I want to be able to configure additional addresses for the IP-Filter that controls the system-user access.</p> <p>Acceptance criteria:</p> <ul style="list-style-type: none"> <li>• The IP-Filter can be extended by a list of IP-addresses and hostnames that are allowed to access the dms-sidecar as well.</li> </ul>

---

TUK-1295 As an administrator, you can configure a pattern that determines the domain name to be used in NTLM environments

As an administrator, I want to be able to configure a pattern that determines the domain name to be used in NTLM environments so that usernames that are synchronized to yuuviz RAD and including domain informs are handled well during authentication.

Hint: During the authentication, NTLM transmits the domain name which can be different from that that was saved via AD sync.

Acceptance criteria:

- It is possible to configure this pattern in the gateway-prod.yml:  
authentication.ntlm.usersubstitutionpattern: \${USER}@\${DOMAIN}.local  
example:  
NTLM transmits: os/testname  
After transformation, it fits the string saved in the yuuviz RAD user management: [testname@os.local](#) 

---

TUK-1320 As an administrator, you are supported by a default log-config writing the security-audit-log into a separate log file

As an administrator, I want to be supported that the default log-config is writing the security-audit-log in a separate log file.

Acceptance criteria:

- the default log-config is so configured that the security-audit-log is written in the separate log file
