

# Bugfixlog yuuvis RAD 8.12

| Schlüssel | Zusammenfassung  | Support Calls |
|-----------|--|---------------|
| DB-6457   | Connection of an external identity provider  | 00036622      |
| DB-6593   | Words are crossed out in the text preview  | 00040548      |
| DB-6599   | Logging in to the client takes very long if there are many bpm models active                         |               |
| ERA-8950  | trivy tests for yRAD 8.10 bpm-service  |               |
| ERA-8952  | trivy tests for yRAD 8.10 inbox-service  |               |
| ERA-8965  | Deleting a DMS-Object that belongs to a workflow-file causes issues in bpm-scripting                 |               |
| ERA-8967  | Variables of type Number cannot be read if Graalvm is used as script engine                          |               |
| ERA-8976  | Core-Service cannot start because of custom index in Oracle database                                 |               |
| ERA-8989  | The inbox-service runs into out-of-memory exception if many processes are in the inbox of many users |               |
| ERA-8997  | Login after deleting a deputy is no longer possible  |               |
| ERA-9005  | Valid placeholders in text patterns generate warnings during validation                              |               |
| OKTO-5295 | Connection of an external identity provider  | 00036622      |
| TUK-1180  | No index update, when field is updated as a side effect by copyItemContent                           | 00036689      |
| TUK-1199  | Connection of an external identity provider  | 00036622      |
| TUK-1305  | The wildcard search with leading * does not function anymore   |               |
| TUK-1344  | In case of txt-formatted files, the preview is crossing out 'name' and is coloring other words       | 00040548      |
| TUK-1351  | The client requests the list of executable processes twice while initializing                        |               |
| TUK-1368  | The client requests the complete process information when starting but should not                    |               |
| TUK-1378  | DMS sidecar does not provide an authentication header for non-Rest-WS endpoints                      |               |
| TUK-1391  | The credential store cannot be initialized during the setup  |               |
| TUK-1426  | Core-service credential store issue  |               |
